<u>Individual Reflections</u>
Benjamin Shaibu

Below are my reflections on my teammates:

<u>Matt</u>

Matt was great at catching assignments that we forgot and quickly followed up with the team. Matt coded the parts of the application he was responsible for very well in addition to picking up extra responsibilities when needed.

I think that Matt would also be benefitted by playing with Rails a bit more and exploring the documentation; some of the routing Rails does is really hard to get down and takes time.

<u>Louis</u>

Louis had a really strong vision for the project. He had some great descriptions and ideas for how to build on what we had. Louis got most of his goals done, which was impressive considering how ambitious he was.

Just in general, it would be useful to let the team know some meeting times don't work as well so we can try to move things around. I think going through some more tutorials on JavaScript and CSS would be helpful in future projects for realizing some of the concepts he envisioned.

<u>Dennis</u>

Dennis was always the first one at each meeting and was very good at keeping us on task. He did a good job on getting his parts completed and was very results-oriented.

I would recommend Dennis check out the Rails Tutorial again and make sure to follow Fat Model-Skinny Controller, which are pretty tricky concepts. I also recommend worrying a little more about the cause of bugs in case they're symptoms of a larger problem (that's more of a general thing than for this project).

It was great working with everyone and I think we did a pretty great job! We all have more to learn about Rails, Web Development, and working in teams in general, but we had a great run!
